

JSB-10L Buffing Machine

Developing a high luster finish on wood can be a frustrating task, especially with irregularly shaped objects such as cabriole legs or turnings. The JET JSB-10L Buffing Machine not only makes polishing those surfaces easy, many find the process to be very enjoyable and rewarding. The visual impact on many of your projects can be spectacular!

Power

Our 1HP motor is tough, reliable and runs very smoothly. This buffer is available with 1725RPM or 3450RPM motors.

The JET JSB-10L Buffing Machine is powered by a tough JET 1HP, 115/230V, 1Ph motor. The motor comes prewired for 115V operation. Our motors are rated using a continuous duty cycle for the truest representation of their power. All of our motors use high quality, pre-lubricated, sealed ball bearings for smooth, long-lasting operation.

The JET JSB-10L Buffing Machine is available in two versions with the motor RPM being the only difference. The JSB-10L motor turns at 1725 RPM while the JSB-10H motor runs at 3450 RPM. These motor choices let you choose the RPM range that best suits your job list and accessory choices.

A simple toggle switch on the front of the motor base turns the JET JSB-10L Buffing Machine on and off and is always within easy reach. The switch is guarded to prevent accidental startups.

Versatile Shafts

The JET JSB-10L Buffing Machine features 10 ¾"-long shafts on both sides of the motor. These shafts are made from high-grade steel and precisely machined to run true and vibration free. To further enhance their stability and durability, the shafts spin in high quality ball bearings.

Each shaft has an 8"-long, 1"-diameter section with a 2"-long 5/8"-diameter threaded section at the end. The left-side threads are reversed (left hand) so the buffing action tends to tighten rather than loosen the nut. We include a selection of

The JET JSB-10L makes high luster finishes easy and fun to do!

The shafts and the selection of spacers and flanges supplied make the JET Buffing machine compatible with a huge array of sanding and buffing accessories.

The all-steel base stabilizes this machine and provides handy storage within.

spacers and flanges that allow installing and using many popular sanding and buffing accessories.

Stand and Storage

The all steel stand has a 20" by 20" base that keeps this 130lb machine remarkably stable. Each corner of the base has a hole that gives you the option of bolting the JET JSB-10L Buffing Machine directly to the floor.

Machine shafts at a comfortable 37 1/2" above the floor. Within the column is a spacious storage compartment complete with its own door. This compartment allows storing all of your supplies and accessories.

The stand has a pair of clear dust collection shrouds, each on fully articulated, tool-free mounts. Each shroud has a clear, flip-up shield that protects you while buffing but flips up out of the way for changing tooling. At the rear of each shroud is a 4" diameter port that makes connecting the JET JSB-10L Buffing Machine to your dust collector or built in dust collection tubing simple.

The shrouds are fully articulating and tool-free. The 4"-diameter connector makes hooking this machine to your dust collection system simple.

Note: The JET JSB-10L Buffing Machine is available without a stand (#577110) for bench mounting.

Accessories

JET offers a selection of buffing compounds and waxes that will help make your project better looking than ever!

JET offers a full range of buffing accessories from high-quality fabric wheels to specially formulated buffing / polishing compounds and waxes. Contact your favorite JET dealer for their selection.
